TeXsword [32/64bit]

Amongst other things, TeXsword (is an equation management macro package specially designed for Microsoft Word. It allows one to: * use LaTeX to create equations * insert equations with labels (bookmarks) * reference equations further on. * automatically number equations * print equations (quadratic, linear, exponential, logarithmic, trigonometric and inverse trigonometric,...) * print equations for a single line or for the whole document. TeXsword setup: TeXsword, the equation manager, requires that equations be created in a format called "DOCMETA.EQ". If you do not have this format, please install the free DOCMETA package, available from web.archive.org/web/archives/cgnu.org/gnu/sysadmin/textsoft/docmeta/pdf/texmac_doc.pdf DOCMETA has been developed for cross-platform installation and automatic translation of documents from other languages. TeXsword is distributed as a package for Windows, with the EXE and. DOCMETA.EQ files being unencrypted. A legal copy of TeXsword can also be downloaded from the website. Installation: You can install TeXsword by downloading the installer from: www.texsword.com/downloads.zip TeXsword.exe The TeXsword.exe program works under MS-Word-XP and MS-Word-2003; it is not compatible with MS-Word-2000 and MS-Word-2002. When you try to run TeXsword, you will be asked if you want to update any missing libraries on your PC. Read the help file to find out how to do so. TeXsword Tutorial: TeXsword documentation is easy to read, and includes a tutorial and example documents. Also you can download TeXsword demonstration documentation and sample documents from the website. If you need any further information, you can contact TeXsword support by mail at support@texsword.com. License: TeXsword is free software distributed under the GNU General Public License. Please visit for details. Notes: You will need the TeXsword.dll file to be able to use the TeXsword functionalities. It is included in the zip archive you can 09e8f5149f

This macros package is designed to make your Word-based word processor more productive. TeXsword contains three main sections: TeXsword installed version Formatting equations with [TeXsword] Creating equations with [TeXsword] Using the [TeXsword] package Allow your Word file to use the same LaTeX packages that you use for your text. There are many more tools and features in TeXsword, for example: Math view in Word Creation of new tabular structures from equations Equation List / Equation number / Equation mark / Definition mark Equation management : equations and equations with labels Inserting equations (with labels) Formatting equations with TeX Creating equations with TeX * All subsequent error messages are in French. The main tools are in English. 2. Installation and configuration TeXsword is a macro package for Microsoft Word. TeXsword is primarily based on the LaTeX package tools. In order to install a macro tool like TeXsword, you have to: first install a LaTeX-based packages (such as dtx, dtx-extra, amsmath, amfonts, epsfig, graphicx, hycolor, hyperref, kvoptions, l3box, l3names, l3pages, l3repository, l3mcol, l3mfctbx, l3mfgui, l3tlafonts, l3unicode, l3pars, l3tag, l3keys, l3algd, l3algcites, l3bibtex, l3doctools, l3regex, l3quark, l3tbtools, l3rbtools, l3courier, l3multicol, l3names, mathtools, ntheorem, threeparttable, xkeyval, xchange and xparse), then you can install TeXsword in order to select and enable new features. In order to know which LaTeX package you have installed, take a look at the Word options of the menu TeXsword...->LaTeX-variables->Install...->Details. 3. Adding TeXsword macros to Microsoft Word From Word's menu: Tools->Customize In the Customize window, select Macros in the left-hand panel. Click Mac

What's New in the TeXsword?

TeXsword includes an equation editor that allows one to produce equations with mathematical notation, and makes it possible to reproduce equations in other computer programs. It supports display of mathematical formulas in a number of ways, including plain TeX and LaTeX math formulas, and labels are created automatically on pages containing displayed equations. TeXsword is a handy equation management macro package specially designed for Microsoft Word. It allows one to: insert equations with labels (bookmarks). Equations can be referenced further on and are automatically numbered. You can also use LaTeX to create equations.
